

The graphs for LIHC and KIRC *strictly-selective* targets

The relationship between different genes in obtained solutions for LIHC and KIRC is visualized in Figure S14 and S15 based on their co-presence in each SL set. Single essentials are shown in red, double SLs in purple and connected by wavy lines, triple SLs in green and connected by dashed lines, and quadruple SLs in blue and connected by solid lines.

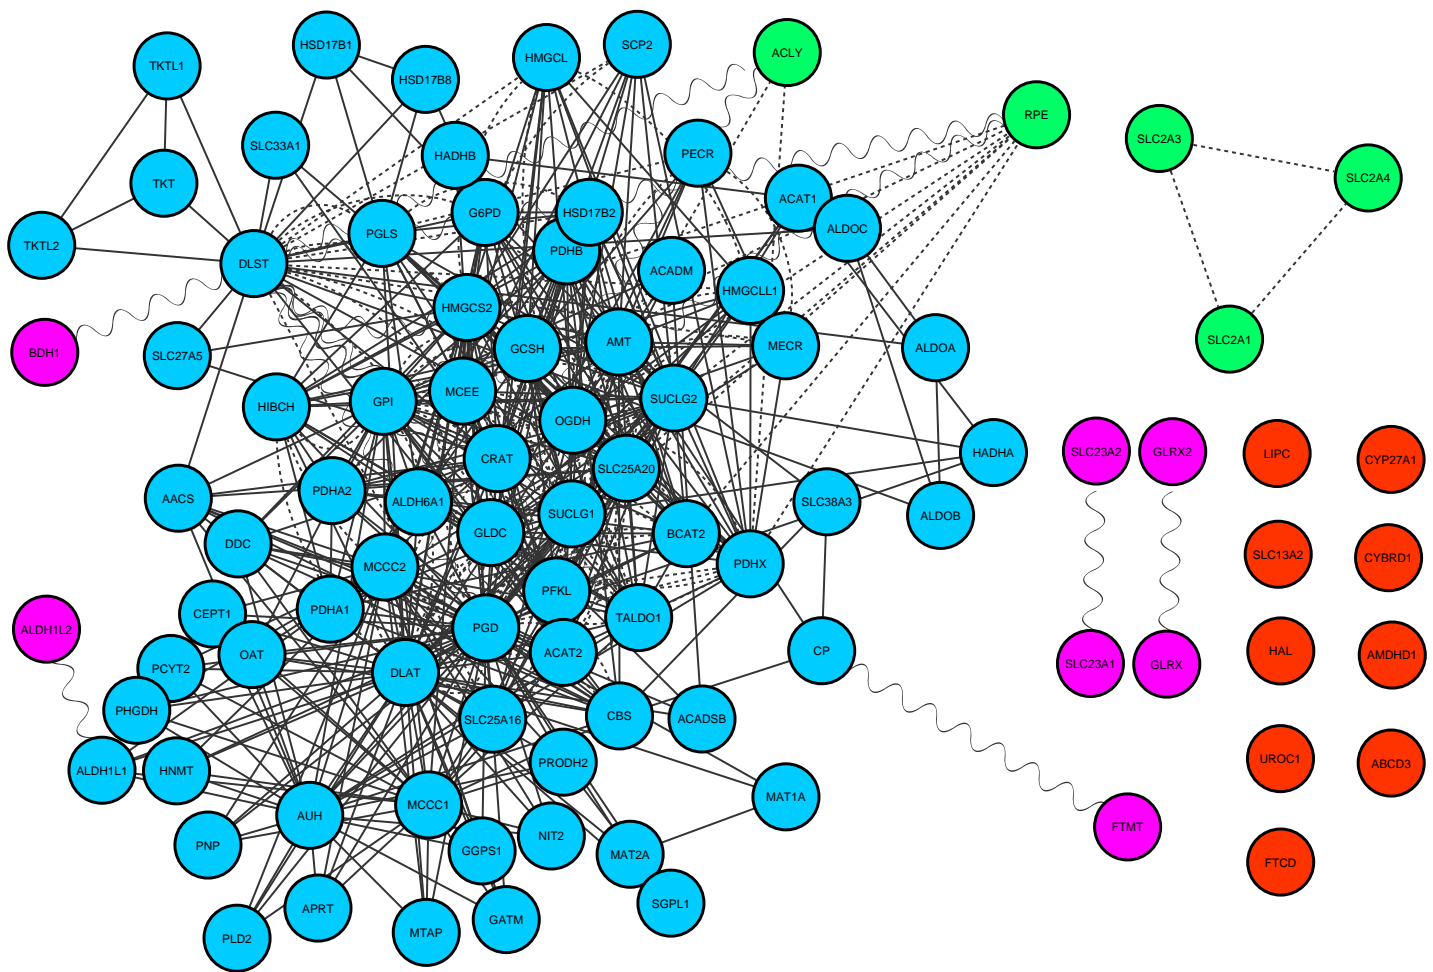

Figure S14. The relation between different genes of identified strictly-selective solutions for LIHC.

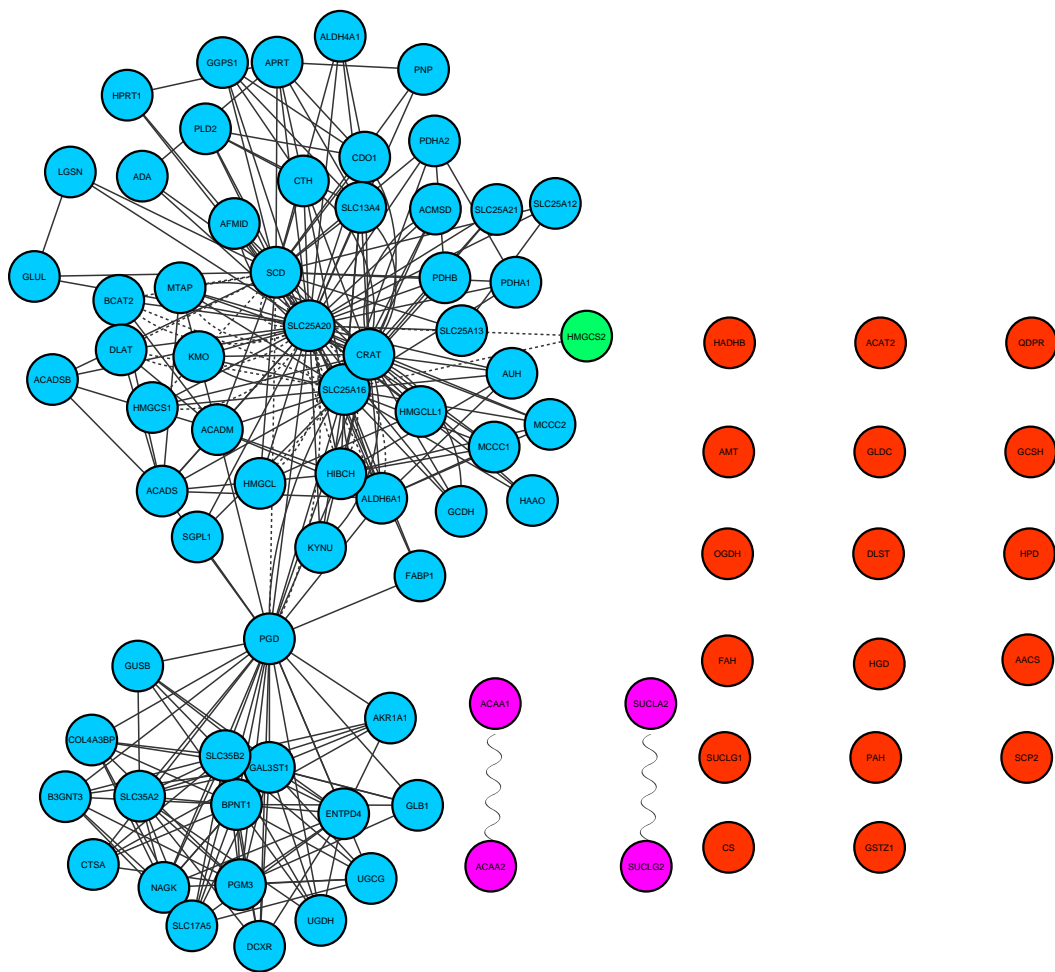

Figure S15. The relation between different genes of identified strictly-selective solutions for KIRC.
